

BALER

Abstract of the Disclosure

A large round baler is equipped with a plurality of components for delivering crop to an inlet of a baling chamber of a large round baler. These components have a width which is substantially wider than the baling chamber inlet and include a crop take-up device and a crop processing arrangement, such as a cutter head, that receives crop from the crop take-up device. The crop processing arrangement delivers the processed crop to a transverse conveyor, which narrows the stream of crop to the width of the baling chamber inlet.

Assignment

The entire right, title and interest in and to this application and all subject matter disclosed and/or claimed therein, including any and all divisions, continuations, reissues, etc., thereof are, effective as of the date of execution of this application, assigned, transferred, sold and set over by the applicant(s) named herein to Deere & Company, a Delaware corporation having offices at Moline, Illinois 61265, U.S.A., together with all rights to file, and to claim priorities in connection with, corresponding patent applications in any and all foreign countries in the name of Deere & Company or otherwise.
